We Quote: The first gold standard Australian clinical trial to determine whether the drug hydroxychloroquine can prevent COVID-19 is now open.

With interest I read this page on your website, and as your aware there is a massive ground swell within the world of evidence that a **Triple Treatment Therapy** has produced strong results of cure and saving lives with a strong reduction in rates of death.

The evidences are solid in spite of the push back from various places for reasons which are clouded and unsupported in firm scientific grounds, as was clearly revealed when Lancet withdraw a paper (Lancet forced to retract influential study discrediting malaria drug's success in treating COVID-19) <https://www.livesitenews.com/news/lancet-forced-to-retract-influential-study-discrediting-malaria-drugs-success-in-treating-covid-19> as the science was found to be essentially false. Switzerland had stopped HCQ on the paper but two weeks later recommenced HCQ and the Two-week gap in use of the Triple Treatment Therapy revealed a stark outcome Death Rates increased.

Source : Johns Hopkins U. data https://github.com/CSSEGISandData/COVID-19/tree/master/csse_covid_19_data

This Triple treatment is commonly known as the Zelenko protocol, <https://thezelenkoprotocol.com/>

Dr. Vladimir Zelenko was the first make known publicly that this treatment regime was providing strong results of cure and prevention of Hospitalization and Deaths his twitter handle is @zev_dr. Dr.

Vladimir Zelenko wrote to President Trump and made him aware of this information and as is known publicly the Surgeon General reviewed this option and approved the Triple Treatment Therapy this happened at the time of the Lancet Paper being published, clearly the Surgeon General was not buying into the study results.

Dr. Vladimir Zelenko has released a paper COVID-19 Outpatients – Early Risk-Stratified Treatment with Zinc Plus Low Dose Hydroxychloroquine and Azithromycin: A Retrospective Case Series Study <https://www.preprints.org/manuscript/202007.0025/v1> it is going through peer review.

The critical factor that must be employed in a study that boldly claim to “Gold Standard” must I feel with honesty and integrity for true medical sciences explore What the Zelenko Protocol says and Hundreds of **American Doctors are saying hydroxychloroquine alone does not work. It only works when used in combination with Zinc.**

WE QUOTE: Hydroxychloroquine only works when used in combination with Zinc, Dr. Anthony Cardillo says on ABC News <https://techstartups.com/2020/04/07/hydroxychloroquine-works-used-combination-zinc-dr-anthony-cardillo-says-abc-news/>

The basis of this statement is as pointed out by **Dr Zelenko**: a board-certified family practitioner in New York that it is Zinc that actually helps slows or decelerates the viral replication within the cell. But on its own, Zinc cannot penetrate the cell without the help of hydroxychloroquine. So, the work of hydroxychloroquine is to help zinc penetrate the cell.

WE QUOTE: Dr. Cardillo “hydroxychloroquine with zinc has been the key to the success. The hydroxychloroquine, he said, “opens the zinc channel” allowing the zinc to enter the cell, which then “blocks the replication of cellular machinery.”

WE QUOTE: Dr. Cardillo “Intracellular Zinc interferes with coronavirus transcription, which results in the ability of the virus to replicate. However, being a ++ ion, extracellular zinc requires active transport to pass across the cell membrane. It so happens that chloroquine is a zinc ionophore, thus provides zinc++ with the transport mechanism. In this instance, chloroquine has no drug action. It is the zinc that is in play, and I find it concerning that so many news organizations (and governments) are failing to convey this fact... opting, instead, to portray chloroquine as having the key drug action,

We believe the Zelenko protocol for treatment in Early stage COVID 19 is as follows:

Hydroxychloroquine Sulfate, Zinc and Azithromycin the three-drug combination are really needed in killing coronavirus.

Unlike the conventional method of admitting patients to the hospitals, Dr. Zelenko’s approach is to provide treatment to patients before their situation get worse, so they don’t have to be admitted into the hospital

Dr. Zelenko says His approach has been so effective to the point that he has treated 900 coronavirus patients with 99.99% rate. His approach is to provide treatment to people so that they don’t have to be put on ventilators.

His out-patient treatment regimen

1. Hydroxychloroquine 200mg twice a day for 5 days
2. Azithromycin 500mg once a day for 5 days
3. Zinc sulfate 220mg once a day for 5 days

Dr. Zelenko In an open letter to medical professionals across the globe,

<https://docs.google.com/document/d/1SesxgaPnpT6OfCYuaFSwXzDK4cDKMbivoALprcVFj48/mobilebasic>

Dr. Zelenko said this: “The rationale for my treatment plan is as follows. I combined the data available from China and South Korea with the recent study published from France (sites available on request).

We know that hydroxychloroquine helps Zinc enter the cell. We know that Zinc slows viral replication within the cell. Regarding the use of azithromycin, I postulate it prevents secondary bacterial infections. These three drugs are well known and usually well tolerated, hence the risk to the patient is low.”

Dr. Zelenko went on to explain that hydroxychloroquine helps zinc penetrate the cell (zinc decelerates viral replication in the cell). He stated that **azithromycin combats secondary infections.**

FDA and CDC

The FDA are now under massive pressure to stop interfering in the use of a medicine which has been on the market for 65 years taken all over the world by millions of people is listed safe for use by the CDC <https://www.cdc.gov/malaria/resources/pdf/fsp/drugs/Hydroxychloroquine.pdf>

We quote CDC Document for public release “Who can take hydroxychloroquine? Hydroxychloroquine can be prescribed to adults and children of all ages. It can also be safely taken by pregnant women and nursing mothers.”

The **United States Senate** has just written to the FDA dated the 18th August 2020 is prudently points out the FDA is operating outside of its guidelines Stating clearly the FDA does not regulate the practice of medicine and the prescribing off-label medicines like HCQ and CQ to treat COVID-19, the letter goes on to say

“the licensed physicians we have heard from have stressed the potential benefits of early outpatient treatment of HCQ for individuals infected with COVID-19, These Physicians have pointed to low mortality rates in other countries – like India, Turkey, South Korea, and Morocco – that are using HCQ widely on outpatient COVID-19 populations before the disease progresses to more lethal stages of the virus that require hospitalization”

United States Senate

WASHINGTON, DC 20510

August 18, 2020

The Honorable Stephen Hahn
Commissioner
U.S. Food and Drug Administration
10903 New Hampshire Avenue
Silver Spring, MD 20993

Dear Commissioner Hahn:

We are examining the U.S. Food and Drug Administration's (FDA) efforts to provide potential treatments to patients suffering from COVID-19. Specifically, we write to request information regarding the FDA's decision to issue and then subsequently revoke the Emergency Use Authorization (EUA) to permit the use of hydroxychloroquine (HCQ) and chloroquine (CQ) to treat COVID-19 patients. Additionally, on August 10th, the FDA denied the EUA for outpatient use of HCQ by Henry Ford Health System physicians.¹

On May 29th, you emphasized the importance of utilizing every possible treatment option to best address the needs of individual patients—including off-label prescribing of HCQ and CQ to treat or prevent COVID-19.² You stated that the FDA does not regulate the practice of medicine and that prescribing off-label medicines like HCQ and CQ to treat COVID-19 is based on an individual assessment for the patient.³

However, we have heard from licensed physicians that have had a far different experience with the FDA's approach. The physicians are concerned about the FDA's decision to revoke the March 28th EUA for HCQ and CQ for treatment of COVID-19. They have described the clear differences between inpatient and outpatient treatments and how this decision has affected their ability to treat patients in different settings. The physicians have warned that the FDA's EUA revocation of HCQ and CQ has led to misinformation and confusion across the country. Some states have restricted the ability of physicians to write and pharmacies to fill HCQ and CQ prescriptions under the longstanding and well-established authority to prescribe FDA approved drugs off-label with a patient's informed consent and according to their clinical judgement.⁴

The licensed physicians we have heard from have stressed the potential benefits of early outpatient treatment of HCQ for individuals infected with COVID-19. These physicians have pointed to the low mortality rates in other countries—like India, Turkey, South Korea, and Morocco—that are using HCQ widely on outpatient COVID-19 populations before the disease progresses to more lethal stages of the virus that require hospitalization.⁵ However, the physicians are concerned that the FDA's actions regarding

¹ Letter from Dr. Peter Stein, Dir., Office of New Drugs, U.S. Food & Drug Admin., to Dr. John McKinnon, Fellowship Research Coordinator, Dep't of Med., Henry Ford Hosp. (Aug. 10, 2020) (on file with Majority Staff, U.S. Senate Committee on Homeland Security and Governmental Affairs).

² Stephen M. Hahn, *Bringing a Cancer Doctor's Perspective to FDA's Response to the COVID-19 Pandemic*, FDA Voices (May 2020), <https://www.fda.gov/news-events/fda-voices/bringing-cancer-doctors-perspective-fdas-response-covid-19-pandemic>.

³ *Id.*

⁴ *State Action on Hydroxychloroquine and Chloroquine Access*, LUPUS FOUND. OF AM., <https://www.lupus.org/advocate/state-action-on-hydroxychloroquine-and-chloroquine-access> (last updated July 30, 2020). Following the FDA's revocation of the EUA for HCQ and CQ on June 15, 2020, Arkansas and Kansas updated state guidance regarding HCQ and CQ use for COVID-19. *Id.* Both states cited the FDA's revocation in their updated guidance, and Arkansas stated that based on the FDA's June 15 revocation, HCQ and CQ should be avoided in both outpatient and hospitalized settings as a treatment for COVID-19. *Id.*

⁵ *Early Treatment with Hydroxychloroquine: A Country-Randomized Controlled Trial*, HCQ TRIALS (Aug. 5, 2020), <https://hcqtrial.com/> (last updated Aug. 13, 2020).

There are at least 51 Studies on HCQ, Hydroxychloroquine, and the data is in and its saying HCQ has Prophylactic Benefits & Safe, Effective Outpatient Treatment in the early stages produces great outcomes.

The Association of American Physicians and Surgeons are suing the FDA to get Hydroxychloroquine approved and released for use. AAPS v. FDA2), No. 1:20-cv-00493-RJJ-SJB (W.D. Mich.).

THE PURPOSE OF MY COMMUNICATIONS IS:

If this is going to be truly a Gold Standard Study to discover a working cure to combat COVID-19 then it must include the Zelenko Protocol approach to treatment in Early Stages and as a Prophylactic.

"CAN YOU CONFIRM THIS WILL BE DONE" -- as a massive portion of the population are aware of the Zelenko Protocol In spite of mainstream media and big tech efforts to suppress the information and done so based on no scientific grounds (*it's a political issue and clearly the loss of human lives is acceptable if it gets their goal achieved "nefarious we are sure".*) as our readers at 4cminewswire, 4cmiTV, and 4cminews will definitely want to see this done

We feel we do not need Studies designed to fail in the hunt for a working treatment which could eliminate the need to shutdown a nation's economy, that solution is not sustainable.
